Experience

Software Engineer SAP-NS2 Mission Jan 2022 – Present

- Built and maintained a distributed data ingestion and cataloging platform on AWS (CloudFormation, EC2, RDS) using Java Spring Boot, TypeScript, and Vue
- Architected an overhauled analytics dashboard and Java Spring backend, expanding viewable metrics by 80% and introducing dashboard creation and sharing features
- Engineered an overhauled page routing system enabling 75% more bookmarkable pages with route state persistence via browser session storage
- Built a full-featured Apache Kafka topic management page supporting message publishing, partition inspection, and offset-level message browsing
- Delivered infrastructure visibility pages for monitoring core system components including Kafka brokers and ZooKeeper instances, reducing monitoring overhead by 45%
- Designed and implemented shared Vue components for viewing and managing user and role-based permissions across multiple domains, supporting full CRUD operations and integrating enterprise role systems from external platforms
- Authored 20+ pages of internal documentation on Apache Kafka and metrics infrastructure, presented through deep-dive sessions to close critical knowledge gaps

Co-founder [Bugbeam.io](#) Dec 2025 – Present

- Built SaaS bug reporting and feedback automation platform for internal teams and external users
- User-facing dashboard built with React, Vite, and Tailwind to manage bug reporting and feedback projects and custom integrations, supporting AI bug classification
- Developed browser extension (native JavaScript) and embeddable widget (React) to allow for bug and feedback reporting via tools such as image capture and webpage markup
- Supports Github, Jira, Asana, Monday, Trello, Zendesk, and Slack integrations to propagate downstream bugs/issues into the dashboard

Co-founder [API Labs](#) Aug 2025 – Present

- Built multiple production APIs on the RapidAPI marketplace, with 50% lower latency than competitors
- Architected scalable data collection pipelines using Python, Docker, and PostgreSQL, incorporating proxy rotation and response caching for reliability
- Optimized browser automation workflows using headless Chrome and virtual display servers for efficient resource and lifecycle management

Software Engineer Intern SAP-NS2 Mission May 2020 – Aug 2021

- Led development of a UI searching mechanism with editable search filters that persist in the session
- Led development of a shared library for viewing and managing user, role, and resource permissions

Projects

Music Social Media 2023 – 2024

- Built music social media application with React, Vite, Java Spring, PostgreSQL, and docker to share music data (songs, albums, playlists) to a follower-based feed with sharing and commenting support

Education

Rochester, NY Rochester Institute of Technology Aug 2017 – Dec 2021

Bachelor of Science in Computer Science, Minor in Mathematics

GPA: 3.78, magna cum laude

Skills

- Languages: TypeScript/Javascript, Java, Python, HTML, CSS, SQL, GraphQL, Bash/PowerShell, C, C#, Assembly (MIPS), Haskell
- Frameworks & Libraries: Vue.js, Java Spring Boot, React, React Redux, Docker, Apache Kafka, Jest, Tailwind
- Tools: Git, Unix, PostgreSQL, MySQL, MongoDB, npm/pnpm, Node.js, Vite, Swagger, AWS (CloudFormation, EC2, RDS), Gradle, Maven, GitHub, Jira, Grafana, Postman, Kibana
